27 January 2022

Recipharm secures vaccine manufacturing deal

Global contract development and manufacturing organization (CDMO), Recipharm, has inked a deal with a top 10 big pharma company to support vaccine manufacturing from its facility in Kaisersberg, France.

The agreement was announced following the successful quality audit and will see Recipharm aseptically pack single-use vaccines, used to treat a severe infectious disease that affects both young children and infants.

The containers will be efficiently filled using Recipharm's specialist blow-fill-seal (BFS) capabilities, creating products that are quick to distribute and simplifying administration for healthcare providers.

Recipharm plans to recruit over 30 members of staff between 2022 and 2026 as the product scales towards commercial production.

Yves Buelens, General Manager at Recipharm's facility in Kaisersberg, commented: "We are very proud to be supporting a big pharma partner in the delivery of a vital vaccine to the market.

This deal is indicative of Recipharm's successful and ongoing product portfolio diversification. We've invested heavily into new capabilities that have built on our BFS expertise and as a result, strengthened our biotech offering. We are now in a position to welcome new biopharma projects to the Kaisersberg site."

Recipharm is investing almost EUR 14 million into its vaccine manufacturing offering at the site.

Located in the Alsace region of France, Kaisersberg is one of Recipharm's specialist sterile manufacturing facilities which had been previously dedicated to the exclusive production of sterile liquids for therapeutic areas, including eye care and ear drops.

This facility has been inspected and approved by multiple regulatory agencies across the globe including ANSM (EU-GMP), FDA and Brazil's ANVISA. It also holds a number of approvals for its environmental management systems and occupational health and safety management system.
